Research Summary

A SLI (Starting, Lighting, and Ignition) battery, also known as a car battery, is a rechargeable energy storage device primarily designed to provide high currents for short periods to start internal combustion engine vehicles. These batteries are commonly lead-acid batteries, comprising lead plates immersed in an electrolyte solution of sulfuric acid. When the vehicle is started, the battery delivers a surge of electrical energy to the starter motor, which turns the engine. Additionally, SLI batteries also power the vehicle's lighting and ignition systems when the engine is not running. SLI batteries are essential components of automotive electrical systems, providing reliable power to start the engine and ensuring the proper functioning of various electrical components while the vehicle is in use.

The major global manufacturers of SLI Battery include GS Yuasa, East Penn, Exide Industries, Johnson Controls, C&D Technologies, Crown Battery, Hitachi Chemical, etc. The global players competition landscape in this report is divided into three tiers.
