Research Summary

A slurry pump is a type of centrifugal pump specifically designed to handle abrasive and viscous fluids containing solid particles suspended in a liquid. These pumps are commonly used in mining, mineral processing, dredging, and other industrial applications where the transfer of slurries, such as sand, gravel, coal, or ore slurries, is required. Slurry pumps feature robust construction with wear-resistant materials and specialized impeller designs to handle the abrasive nature of slurries without clogging or damage. They typically have larger passages and heavier-duty components compared to standard centrifugal pumps to accommodate the abrasive particles present in the slurry. Slurry pumps play a critical role in maintaining efficient and reliable operations in industries where the handling of abrasive slurries is essential for production processes.

The major global manufacturers of Slurry Pump include Metso, Weir Group, ITT Goulds Pumps, Grundfos, Flowserve, KSB, Tsurumi Pump, Xylem, EBARA Pumps, Shijiazhuang Industrial Pump, Shijiazhuang Kingda Pump, LEO Group, Excellence Pump Industry, Schurco Slurry, etc. The global players competition landscape in this report is divided into three tiers.
