Research Summary

Smart dimming glass, also known as switchable glass or privacy glass, is an innovative glazing technology that allows users to control the transparency of glass surfaces electronically. This glass typically consists of a special film or coating sandwiched between layers of glass that can change its opacity when an electric current is applied. By adjusting the voltage, users can switch the glass from transparent to opaque or vice versa, providing privacy, glare reduction, or daylight control at the touch of a button or through automated systems. Smart dimming glass finds applications in various industries, including architecture, automotive, healthcare, and hospitality, where it can be used for windows, partitions, skylights, and display screens, offering versatility, energy efficiency, and aesthetic appeal.
