Research Summary

An SMD varistor, also known as a surface-mount varistor, is a type of electronic component used to protect circuits from transient voltage spikes and surges. Varistors are made from semiconductor materials and exhibit a nonlinear voltage-current characteristic, meaning their resistance decreases sharply as the voltage across them increases above a certain threshold. This property allows varistors to absorb excess voltage and dissipate transient energy, thereby safeguarding sensitive electronic components like integrated circuits and semiconductors from damage. SMD varistors are compact and designed for surface-mount applications, making them suitable for use in modern electronic devices where space efficiency and robust transient protection are critical.

The major global manufacturers of SMD Varistor include TDK, Panasonic, AVX, KOA Corporation, Littelfuse, MARUWA, Lattron, Shenzhen Sunlord, JOYIN, Sinochip Electronics, Yageo, TA-I Technology, ROHM, Cytotec, Walsin Technology, Bourns, etc. The global players competition landscape in this report is divided into three tiers.
