### Research Summary

SmFeN magnets, also known as samarium-iron-nitride magnets, are a type of rare-earth magnet known for their exceptional magnetic properties. These magnets are composed of samarium, iron, and nitrogen, with small amounts of other elements added to enhance their performance. SmFeN magnets exhibit high magnetic strength, coercivity, and thermal stability, making them suitable for various applications where strong and reliable magnetic fields are required. They are commonly used in industries such as electronics, automotive, aerospace, and medical devices, where their high performance and compact size are advantageous. SmFeN magnets offer a viable alternative to traditional rare-earth magnets such as neodymium-iron-boron (NdFeB) magnets, particularly in applications where temperature resistance and corrosion resistance are critical factors.

The major global manufacturers of SmFeN Magnets include Daido Electronics, Sumitomo Metal Mining, Nichia Corporation, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading

enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale.
