Research Summary

A smoke extractor exhaust fan is a mechanical ventilation device specifically designed to remove smoke and hot gases from indoor environments during fire emergencies. These fans are typically installed in commercial and industrial buildings, as well as in certain residential settings, and are strategically placed in areas such as stairwells, corridors, and mechanical rooms. Activated either automatically by smoke detectors or manually through control panels, smoke extractor exhaust fans draw smoke and heat out of the building through ventilation ducts or openings, helping to improve visibility, minimize smoke inhalation risks, and limit the spread of fire to other areas. By efficiently evacuating smoke and toxic gases from enclosed spaces, smoke extractor exhaust fans aid in safe evacuation for building occupants and provide firefighters with enhanced access to the fire source, thereby reducing property damage and ensuring the safety of individuals during fire emergencies.
