Research Summary

Sn-2 palmitate, also known as 2-palmitoylglycerol or 2-palmitoyl glycerol, is a type of lipid molecule found in human breast milk and some infant formulas. It is a specific form of triglyceride where the palmitic acid fatty acid is esterified to the second position on the glycerol backbone. This particular positioning enhances the absorption and utilization of essential fatty acids, such as docosahexaenoic acid (DHA) and arachidonic acid (ARA), by the infant's body. Sn-2 palmitate mimics the structure of human breast milk more closely than traditional infant formulas, potentially offering benefits such as improved fat absorption, gastrointestinal comfort, and overall development in formula-fed infants. As a result, it is often used as an ingredient in specialized infant formulas designed to provide optimal nutrition and support healthy growth and development during infancy.

The major global manufacturers of Sn-2 Palmitate include Advanced Lipids, IOI Loders Croklaan, Zhejiang Beijia, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command
