Research Summary

Sodium acetate crystals, also known as sodium ethanoate crystals, are a solid form of sodium acetate, a chemical compound with the formula CH_3COONa . These crystals typically occur as the trihydrate form of sodium acetate, containing three water molecules for every sodium acetate molecule. Sodium acetate crystals have a wide range of applications in various industries and scientific fields. They are commonly used in heat packs or hot packs, where they serve as a non-toxic, reusable, and easily activated heat source. When the crystals are dissolved in water and heated, they undergo a phase transition from a supersaturated solution to a crystalline solid, releasing heat in the process. This exothermic reaction results in the generation of heat, making sodium acetate crystals an effective and convenient solution for providing warmth in various applications. Additionally, sodium acetate crystals are used in laboratory settings as a buffering agent, pH regulator, and reagent in chemical synthesis reactions.

The major global manufacturers of Sodium Acetate Crystal include Mitsubishi Chemical
