Research Summary

Sodium butyrate is a compound that consists of sodium salt and butyric acid, which is a short-chain fatty acid. It plays a crucial role in various biological processes, including acting as an energy source for intestinal cells and influencing gene expression. Sodium butyrate is commonly used in medicine and research, particularly in studies related to gastrointestinal health and cancer treatment, due to its ability to promote cell differentiation and inhibit inflammation. Glycerol tributyrates, on the other hand, is an ester formed by combining glycerol with three molecules of butyric acid. It is used as a prodrug to deliver butyric acid to the colon, where it can exert beneficial effects on intestinal health. Glycerol tributyrates serves as a source of butyric acid in the gastrointestinal tract, where it acts similarly to sodium butyrate in supporting intestinal function, improving barrier integrity, and modulating immune responses. Both compounds have significant implications in the fields of medicine, nutrition, and research concerning gut health and metabolic disorders.

The major global manufacturers of Sodium Butyrate and Glycerol Tributyrates include King Techina, Zhejiang HuiJia, Singao, Yaofi, Jiangxi Kangbo, Chengyuan Biological, Guangdong VTR Bio-Tech, Alliance, Chengwu Yixin Environmental Technology, Aolandishengwu, etc. The global players competition landscape in this report is divided into three tiers.
