Research Summary

Sodium copper chlorophyllin is a water-soluble derivative of chlorophyll, a natural green pigment found in plants. It is produced by replacing the magnesium atom at the center of the chlorophyll molecule with copper and then binding it to sodium. Sodium copper chlorophyllin is commonly used as a food additive and a natural green colorant in various food and beverage products. It is also used as a dietary supplement and in cosmetic products for its potential health benefits and natural green color. Sodium copper chlorophyllin has antioxidant properties and is believed to have detoxifying and deodorizing effects in the body. In the food industry, it is used to enhance the color of foods and drinks without altering their taste or nutritional content. As a natural and safe ingredient, sodium copper chlorophyllin has gained popularity as a healthier alternative to synthetic food colorants and is widely used in the food and health supplement industries.
