Research Summary

Sodium isobutyl xanthate (SIBX) is a pale yellow to yellow-green crystalline substance used primarily as a collector in the flotation of various minerals. It belongs to a class of chemicals known as xanthates, which are widely employed in the mining industry to facilitate the separation of valuable minerals from ores. Sodium isobutyl xanthate works by forming a hydrophobic layer on the surface of mineral particles, enabling them to attach to air bubbles in the flotation process. This allows for the selective flotation of minerals such as copper, lead, zinc, and nickel from their respective ores. SIBX is soluble in water and typically supplied as a powder or pellet form for ease of handling and transportation. It is important to handle sodium isobutyl xanthate with care due to its potential irritant properties and the need to minimize environmental impact during its use in mineral processing operations.

The major global manufacturers of Sodium Isobutyl Xanthate include Qixia Tongda Flotation Reagent, Tieling Flotation Reagent, Qingdao Ruchang Mining Industry, TC China, SNF FloMin, Shangdong Aotai, Jinduicheng Molybdenum Group, Shanghai
