Research Summary

Sodium metal is a soft, silvery-white alkali metal with the atomic number 11 and chemical symbol Na. It is highly reactive and is stored under oil to prevent it from reacting with moisture or oxygen in the air. Sodium is primarily known for its role in chemistry and industry, where it serves as a crucial reagent and component in various chemical reactions and processes. In its pure form, sodium is rarely used due to its extreme reactivity and tendency to spontaneously ignite in air. Instead, sodium compounds such as sodium chloride (table salt) and sodium hydroxide are more commonly encountered in everyday applications. In industry, sodium metal is used in the production of organic compounds, pharmaceuticals, and various alloys. It also has niche applications in nuclear reactors as a coolant and in certain types of batteries. Despite its limited direct use, sodium's reactivity and unique chemical properties continue to make it a significant element in scientific research and industrial applications.

The major global manufacturers of Sodium Metal include MSSA, China National Salt Industry Corporation, Inner Mongolia Lan Tai Industrial, Wanji Holdings Group Limited,

Shangdong Moris Tech, etc. The global players competition landscape in this report is divided into three tiers.
