Research Summary

Sodium starch glycolate is a white to off-white, odorless, and tasteless powder derived from starch, typically corn, potato, or wheat. It is widely used in the pharmaceutical industry as a super-disintegrant in tablet formulations. Sodium starch glycolate helps to rapidly break down tablets into smaller particles when exposed to water or gastric fluids, facilitating their dissolution and absorption in the gastrointestinal tract. This property is crucial for medications that require rapid onset of action or are intended for patients with difficulty swallowing. Sodium starch glycolate is preferred over other disintegrants due to its efficiency, compatibility with active ingredients, and minimal impact on tablet hardness and stability during manufacturing. It is generally recognized as safe (GRAS) for use in pharmaceuticals and is also utilized in some food products as a food additive to improve texture and shelf life.

The major global manufacturers of Sodium Starch Glycolate include DFE Pharma, JRS Pharma, Roquette Freres, Anhui Sunhere Pharmaceutical Excipients, Shreeji Pharma International, Liaocheng A Hua Phamerceutical, Prachin Chemical, QFTL Medical
