Research Summary

Sodium trimetaphosphate (STMP) is a sodium polyphosphate composed of cyclic trimers of orthophosphate units linked together. It appears as a white crystalline powder and is soluble in water. STMP is primarily used as a sequestrant, chelating agent, and water softener in various industrial applications. In the food industry, it is utilized as an emulsifier and stabilizer, helping to improve the texture and shelf life of processed foods. STMP also finds application in detergents and cleaning products as a builder, where it enhances the cleaning efficiency by preventing the precipitation of calcium and magnesium ions that cause water hardness. Additionally, it is used in water treatment to inhibit scale formation and corrosion in pipes and equipment. In personal care products, sodium trimetaphosphate functions as a buffering agent and can help to adjust pH levels. While generally regarded as safe (GRAS) for use in food and non-toxic in normal handling, STMP should be handled with care to avoid respiratory irritation and eye contact.

The major global manufacturers of Sodium Trimetaphosphate include ICL, Innophos,

Xingfa Chemicals, Sichuan Mianzhu Norwest Phosphate, Guizhou Sino-Phos Chemical, Chengdu Chemical Engineering Research, Xuzhou Tianjia, Reephos Group, Sichuan Chenghong Phosph-Chemical, Xingxin Biological, Xinxiang Huaxing Chemical, Hens, etc. The global players competition landscape in this report is divided into three tiers.
