### Research Summary

Soft contact lenses are thin, flexible lenses made from water-absorbing plastics called hydrogels or silicone hydrogels. They are designed to conform to the curvature of the eye and provide comfortable vision correction or cosmetic enhancement. Soft contact lenses are widely used due to their comfort, ease of adaptation, and ability to allow oxygen to pass through to the cornea, maintaining eye health. They come in various types, including daily disposable, bi-weekly, and monthly lenses, each offering different wearing schedules and replacement frequencies. Soft contact lenses can correct refractive errors such as myopia (nearsightedness), hyperopia (farsightedness), astigmatism, and presbyopia (difficulty seeing close objects as we age). They are also available in tinted or colored options for cosmetic purposes. Proper care and hygiene, including regular cleaning and disinfection, are essential to maintain eye health and extend the lifespan of soft contact lenses.
