Research Summary

A soil stabilization product is a material or chemical additive used to improve the physical properties and load-bearing capacity of soil for construction and engineering purposes. These products enhance soil strength, reduce permeability, and increase resistance to erosion and weathering, making the soil more suitable for supporting structures such as roads, buildings, and embankments. Common soil stabilization products include lime, cement, fly ash, bitumen, and various synthetic polymers. By altering the soil's characteristics, these additives help prevent settlement and structural failure, providing a stable foundation and prolonging the lifespan of infrastructure. Soil stabilization is crucial in areas with weak or unstable soils, ensuring safer and more durable construction outcomes.

The major global manufacturers of Soil Stabilization Product include Caterpillar (US), AB VOLVO (Sweden), FAYAT (France), WIRTGEN GROUP (Germany), CARMEUSE (US), Global Road Technology (Australia), Soilworks (US), Graymont (Canada), SNF Holding (US), Aggrebind (US), IRRIDAN USA (US), Altacrete (US), etc. The global
