Research Summary

Solar control window films are specialized coatings applied to windows in buildings and homes to manage solar heat gain, reduce glare, and enhance energy efficiency. These films are typically made from polyester or other polymer materials infused with metalized particles or ceramic layers that reflect, absorb, or scatter solar radiation. By blocking a significant portion of infrared (IR) and ultraviolet (UV) rays from entering through windows, solar control films help regulate indoor temperatures, reduce cooling costs, and protect furnishings and artwork from fading due to UV exposure. They come in varying shades and levels of tint to suit different aesthetic preferences while still allowing natural light to enter. Solar control window films can also enhance privacy by reducing visibility from the outside. Overall, they improve comfort, energy efficiency, and the overall sustainability of buildings by reducing reliance on air conditioning and mitigating the environmental impact of energy consumption.

The major global manufacturers of Solar Control Window Films include 3M, Eastman, Erickson International, Garware Polyester, Garware SunControl, Hanita Coating,
