Research Summary

Solar EVA (Ethylene-Vinyl Acetate) is a critical component in the manufacture of photovoltaic (PV) modules, serving as the encapsulant that seals and protects solar cells within the module structure. It is a transparent, thermoplastic material that is applied as a layer between the front glass cover and the solar cells, as well as between the cells and the backsheet. Solar EVA plays several essential roles: it adheres the solar cells to the module's front and back layers, provides electrical insulation to prevent short circuits, and absorbs shocks and vibrations to enhance the durability of the solar panel. Additionally, EVA is formulated to be resistant to ultraviolet (UV) radiation, humidity, and temperature fluctuations, ensuring long-term stability and performance of the PV module in various environmental conditions. Solar EVA is crucial for maintaining the structural integrity of solar panels and optimizing their efficiency in converting sunlight into electricity over their operational lifetime.

The major global manufacturers of Solar EVA include Hangzhou First, Changzhou Sveck, HIUV, STR, Inc, Bridgestone Corporation, SKC, Hanwha Solutions/Advanced Materials, TPI All Seasons Company, Lucent Clean Energy, Changzhou Almaden,
