### Research Summary

Solar photovoltaic (PV) glass is a specialized type of glass designed to integrate solar cells for the generation of electricity from sunlight. It typically consists of multiple layers, with the top layer incorporating transparent solar cells that capture sunlight and convert it into electricity. These solar cells are often thin-film or amorphous silicon technologies, allowing them to maintain transparency while harnessing solar energy. Solar PV glass is commonly used in building-integrated photovoltaics (BIPV), where it serves as both a structural element and an energy-generating component in windows, facades, and skylights. This technology enables architects and builders to incorporate renewable energy generation seamlessly into the design of buildings, contributing to sustainability efforts and reducing reliance on traditional energy sources. Solar PV glass finds applications in both residential and commercial construction, offering a dual functionality of energy production and natural light transmission.

The major global manufacturers of Solar Photovoltaic Glass include Xinyi Solar, FLAT, CSG, Almaden, Anci Hi-Tech, Irico Group, Huamei Solar Photovoltaic Glass, AVIC
