Research Summary

Solder balls refer to small spheres or droplets of solder that are typically used in electronic packaging and assembly processes. These solder balls are made from solder alloys such as tin-lead (Sn-Pb) or lead-free compositions like tin-silver-copper (Sn-Ag-Cu). They are commonly used in ball grid array (BGA) packages and flip-chip assemblies, where they serve as interconnects between the integrated circuit (IC) chip and the substrate or circuit board. During the solder reflow process, solder balls are melted and reflowed to form electrical and mechanical connections between the chip and the board, ensuring reliable electrical conductivity and structural integrity. Solder balls are manufactured with precise diameter specifications to ensure consistent and reliable solder joints, contributing to the overall performance and reliability of electronic devices and assemblies.

The major global manufacturers of Solder Ball include Senju Metal, Accurus, DS HiMetal, NMC, MKE, PMTC, Indium Corporation, YCTC, Shenmao Technology, Shanghai hiking solder material, etc. The global players competition landscape in this report is divided into three tiers.
