Research Summary

Solder paste flux is a critical component within solder paste that serves multiple functions during the soldering process, particularly in the assembly of electronic circuit boards. It is a chemical mixture designed to remove oxides and other impurities from the metal surfaces, ensuring that the solder can form a clean, reliable bond. The flux promotes wetting by reducing the surface tension of the molten solder, allowing it to spread and adhere effectively to the PCB pads and component leads. Additionally, flux provides temporary tackiness to hold components in place before reflow soldering. Post-soldering, it also helps in preventing further oxidation during the cooling process, contributing to the durability and electrical integrity of the soldered joints.

The major global manufacturers of Solder Paste Flux include MacDermid Alpha Electronics Solutions, Senju Metal Industry, Shenzhen Vital New Material, Shenmao Technology, Harima, Heraeus, Indium, Tongfang Tech, Inventec, AIM, KOKI, Nihon Superior, Sumitomo Bakelite, Tamura, KAWADA, Yong An, etc. The global players competition landscape in this report is divided into three tiers.
