Research Summary

A Solid Phase Synthesis Carrier is a material used as a support structure in solid-phase synthesis (SPS), a technique widely employed in the production of peptides, oligonucleotides, and other complex organic molecules. These carriers, typically made of polymeric resins or inorganic materials like silica, provide a stable and inert surface onto which reactants are attached and sequentially built into the desired compound. The solid support enables easy separation of intermediates from reaction mixtures, simplifying purification and improving synthesis efficiency. Solid-phase synthesis carriers play a crucial role in pharmaceutical research, combinatorial chemistry, and biotechnology, allowing for the rapid and automated production of high-purity compounds with minimal reagent waste.

The major global manufacturers of Solid Phase Synthesis Carrier include Nitto, Sunresin, Merck, Cytiva, Agilent, Tianjin Nankai Hecheng Science & Technology, Activotec, RawPEG, etc. The global players competition landscape in this report is divided into three tiers.
