Research Summary

Solid Surface and Other Cast Polymers refer to synthetic materials used in construction and design, primarily composed of resins and minerals. Solid surface materials, such as Corian and Avonite, consist of acrylic or polyester resins mixed with mineral fillers like alumina trihydrate. These materials are molded into sheets and fabricated into countertops, sinks, and wall panels due to their seamless appearance, durability, and ease of maintenance. Other cast polymers, like cultured marble and engineered stone, combine resins with crushed stone or marble particles to mimic the look of natural materials while offering superior strength and design versatility. Both solid surface and cast polymer materials are valued for their aesthetic appeal, resistance to stains and scratches, and the ability to be customized with a range of colors and textures, making them popular choices in residential and commercial applications for surfaces that demand both style and durability.

The major global manufacturers of Solid Surface & Other Cast Polymers include
