Research Summary

Solvent recycling is a process that involves recovering and reusing solvents from waste streams generated during industrial processes. This method helps to reduce the consumption of new solvents, minimize waste disposal costs, and lower the environmental impact associated with solvent use. Solvent recycling typically employs distillation or other separation techniques to separate solvents from contaminants and impurities, such as pigments, resins, or metals. Once recovered, solvents can be purified and returned to use in their original applications or in other compatible processes, maintaining their chemical properties and performance. Solvent recycling is widely practiced in industries such as pharmaceuticals, paints and coatings, printing, and electronics manufacturing, where solvents are critical for various manufacturing processes. By implementing solvent recycling programs, companies can achieve significant cost savings, enhance sustainability efforts, and reduce their overall carbon footprint.

The major global manufacturers of Solvent Recycling include Veolia, Clean Planet

Chemical, CycleSolv, Tradebe, Clean Harbors, Nippon Refine, Shinko Organic Chemical Industry, Maratek Environmental, Yang Linhong, IST Pure, CBG Technologies, Quanzhou Tianlong, etc. The global players competition landscape in this report is divided into three tiers.
