Research Summary

Special copper clad laminate (CCL) refers to a specialized type of substrate material used in the fabrication of printed circuit boards (PCBs). Unlike standard CCLs, which typically consist of a thin layer of copper foil bonded to a fiberglass-reinforced epoxy resin (FR4) substrate, special CCLs are engineered to meet specific performance criteria for demanding applications. These specialized laminates may include variations such as high-frequency CCLs designed for signal integrity at GHz frequencies, high-temperature CCLs capable of withstanding extreme heat environments, low-dielectric CCLs for minimizing signal loss, thermally conductive CCLs for efficient heat dissipation, and flexible or rigid-flex CCLs used in flexible PCB designs. Special CCLs are selected based on their unique properties to optimize the electrical, thermal, and mechanical performance required in advanced electronic devices across industries including telecommunications, automotive, aerospace, and consumer electronics.

The major global manufacturers of Special Copper Clad Laminate include Taiwan Union Technology Corporation (TUC), ITEQ, EMC, Showa Denko Materials, Panasonic
