Research Summary

Sperm freezing medium is a specialized solution used to preserve sperm cells through a process called cryopreservation. This medium typically contains a combination of cryoprotectants, buffering agents, and other components designed to protect sperm cells during freezing and thawing. Cryoprotectants like glycerol or dimethyl sulfoxide (DMSO) help prevent ice crystal formation within the sperm cells, which can damage them. Buffering agents maintain the pH of the medium, ensuring the stability of the sperm cells. Additionally, antioxidants may be included to protect sperm from oxidative stress during freezing and thawing. Sperm freezing medium is essential in assisted reproductive technologies (ART), allowing sperm samples to be stored for long periods while maintaining their viability. It is used in procedures such as sperm banking, fertility preservation, and in vitro fertilization (IVF), providing couples with options for family planning and fertility treatment.

The major global manufacturers of Sperm Freezing Medium include CooperSurgical, Kitazato Corporation, FUJIFILM Irvine Scientific, Vitrolife Group, Gynotec B.V., FertiPro
