Research Summary

Spherical alumina refers to alumina particles that have been engineered or processed into spherical shapes. Alumina, or aluminum oxide, is a ceramic material known for its hardness, high thermal stability, and resistance to corrosion. The spherical form of alumina particles is typically achieved through manufacturing techniques like spray drying or fluidized bed technology, which yield particles with uniform size distribution and enhanced flow properties. Spherical alumina finds diverse applications in industries such as catalyst manufacturing, chromatography, ceramics, and electronics. Its spherical shape allows for efficient packing in catalyst beds and chromatography columns, improves dispersion in materials, and reduces abrasion in composite formulations. Spherical alumina particles contribute to improved performance and operational efficiency in various industrial processes where precise particle characteristics are critical for achieving desired outcomes.

The major global manufacturers of Spherical Alumina include Showa Denko, CMP, Bestry, Nippon Steel, Denka, Sibelco, Anhui Estone Materials Technology, Dongkuk
