Research Summary

Spherical boron nitride (BN) particles are a unique form of boron nitride, a high-performance ceramic material, characterized by their spherical shape and exceptional properties, such as high thermal conductivity, electrical insulation, and chemical stability. These particles are often used as fillers or additives in various industrial applications, including lubricants, coatings, polymers, and composites, to enhance their thermal management, mechanical strength, and wear resistance. The spherical morphology of BN particles allows for uniform dispersion in different materials, improving the overall performance and durability of the final product. Due to its high-temperature stability and resistance to oxidation, spherical boron nitride is also utilized in electronic and aerospace industries, where effective heat dissipation and material durability are crucial. Its combination of electrical insulation and thermal conductivity makes it especially valuable in semiconductor and electronic packaging applications.

The major global manufacturers of Spherical Boron Nitride Particles include Saint-Gobain, 3M, Xtra GmbH, Yaan Bestry Performance Materials, Suzhou Nutpool
