### Research Summary

Sphygmomanometers are medical devices used to measure blood pressure. They typically consist of an inflatable cuff that wraps around the upper arm or wrist, a pressure meter (manometer) to measure the pressure in the cuff, and a stethoscope or electronic sensor to detect the sounds of blood flow in the arteries (Korotkoff sounds). There are two main types of sphygmomanometers: manual and digital. Manual sphygmomanometers require the healthcare provider to inflate the cuff using a rubber bulb and then slowly deflate it while listening for the Korotkoff sounds with a stethoscope. Digital sphygmomanometers automate this process, displaying blood pressure readings digitally on a screen. Accurate blood pressure measurement is crucial for diagnosing hypertension and monitoring cardiovascular health, making sphygmomanometers essential tools in medical practice.

The major global manufacturers of Sphygmomanometers include Omron, AandD Medical, Yuwell, Andon, Microlife, Health and Life, Rossmax, SunTech Medical, Hill-Rom, American Diagnostic, Beurer, Bosch + Sohn, Briggs Healthcare, Medisana,
