### Research Summary

A split-type RV air conditioner is a specialized cooling system designed for recreational vehicles (RVs), comprising two main components: an indoor unit and an outdoor unit. The indoor unit, located inside the RV, includes the evaporator coil, fan, and air distribution system, while the outdoor unit, positioned outside the RV, houses the compressor, condenser coil, and fan. Connected by refrigerant lines and electrical wiring, these units work in tandem to provide efficient cooling for the RV interior. The split-type design allows for flexible installation options, with the outdoor unit often mounted on the roof or exterior wall to reduce noise and vibration inside the RV. Available in various sizes and capacities, split-type RV air conditioners offer comfort and climate control for occupants during travel or while parked at a campsite.
