Research Summary

Sports compression wear refers to form-fitting garments made from elastic materials like spandex or elastane, designed to provide graduated compression to specific muscle groups during physical activity. These garments, including shirts, shorts, leggings, sleeves, and socks, are engineered to apply gentle pressure to the muscles, which can enhance blood circulation, improve oxygen delivery, reduce muscle vibration, and support muscle alignment. This compression is believed to aid in muscle recovery by promoting faster removal of metabolic waste products and reducing muscle soreness and fatigue.
