Research Summary

Squalane oil is a highly refined and stable form of squalane, which itself is a saturated hydrocarbon naturally found in human sebum (skin oil) and in the livers of certain fish. Squalane oil is produced by hydrogenating squalene, a process that removes the double bonds from the squalene molecule, making it more resistant to oxidation and degradation. This results in a colorless, odorless, and lightweight oil that is highly compatible with human skin. Squalane oil is prized in skincare and cosmetics for its excellent moisturizing and emollient properties. It helps to hydrate the skin by forming a protective barrier that locks in moisture without a greasy feel. Squalane oil is suitable for all skin types, including sensitive and acne-prone skin, as it is non-comedogenic (does not clog pores) and has low potential for irritation. It is used in various skincare products such as moisturizers, serums, facial oils, and creams to improve skin texture, elasticity, and overall appearance. Additionally, squalane oil is used in hair care products to add shine and manageability, as well as in formulations for its stability as a carrier oil in pharmaceuticals and cosmetic actives.

The major global manufacturers of Squalane Oil include Kishimoto, EFP, VESTAN,
