Research Summary

A Squeeze Casting Machine is a specialized industrial device used in metalworking and manufacturing processes to produce high-quality metal parts with complex shapes and superior mechanical properties. It combines elements of both casting and forging processes by injecting molten metal into a mold under high pressure, which eliminates porosity and ensures tight control over the metal's solidification process. This method enhances the structural integrity and overall performance of the cast parts, making them ideal for applications in aerospace, automotive, and other industries where precision and strength are critical. The machine typically operates with hydraulic or mechanical force to apply the required pressure, enabling the production of intricate components that meet stringent quality standards.

The major global manufacturers of Squeeze Casting Machine include Buhler, Toshiba Machine, L.K.
