Research Summary

Stage top incubators are specialized laboratory devices used in microscopy to create a controlled environment for live cell imaging. These devices consist of a platform that fits onto the stage of a microscope and provides precise control over temperature, humidity, and CO₂ levels, mimicking the conditions necessary for cell growth and viability. Stage top incubators are essential for experiments requiring long-term observation of live cells under a microscope, such as time-lapse imaging, cell behavior studies, and drug screening assays. They enable researchers to maintain optimal conditions for cell culture directly on the microscope stage, minimizing disturbances and ensuring accurate and reliable results. Additionally, some stage top incubators offer features such as multiple chamber configurations, integrated imaging capabilities, and compatibility with various microscopy techniques, enhancing their versatility and utility in advanced live cell imaging applications.

The major global manufacturers of Stage Top Incubators include IBIDI GMBH, Interherence, OKOLAB, Nanolive, Micrasys, Live Cell Instrument (LCI), Pecon, Tokai
