Research Summary

Steel billets are semi-finished metal products that serve as raw material for further processing into finished steel products. They are typically cast in a square or rectangular cross-section and have a relatively large cross-sectional area compared to their length. Steel billets are produced through a process called continuous casting, where molten steel is poured into a mold and then cooled and solidified to form the desired shape. Once solidified, the billets are typically hot rolled or forged into various shapes such as bars, rods, beams, plates, or tubes, depending on the intended application. Steel billets are commonly used in the manufacturing of construction materials, automotive parts, machinery components, pipes, and fittings. They are valued for their uniform composition, high strength, and versatility, making them essential components in the steel industry and various manufacturing sectors.

The major global manufacturers of Steel Billet include Baosteel, HBIS Group, Shagang Group, Anshan Steel, Shougang Group, Shandong Iron & Steel Group, Jianlong Group, Valin Group, Masteel, Benxi Iron & Steel (Group), CSC, Rizhao Steel, Qian'an Jiujiang Wire Rod, Rongmao Industrial Group, Hebei Xinda, Rockcheck Group, Huaxi Steel,
