Research Summary

Steel grating is a type of grid structure made from steel bars or metal sheets that are welded or joined together at intersections to form a sturdy and durable framework. The bars or sheets are typically arranged in a grid pattern with uniform spacing between them, creating an open surface that allows for the passage of light, air, and fluids while providing support and traction for people, vehicles, and materials. Steel grating is commonly used in industrial, commercial, and infrastructure applications such as walkways, platforms, stair treads, catwalks, drainage covers, and safety barriers. It offers advantages such as high strength, corrosion resistance, fire resistance, and low maintenance requirements, making it suitable for harsh environments and heavy-duty use. Steel grating is available in various materials, sizes, shapes, and surface finishes to meet specific requirements and applications, and it can be custom fabricated to fit unique project needs. Overall, steel grating provides a versatile and cost-effective solution for enhancing safety, accessibility, and functionality in a wide range of settings.
