### Research Summary

Steel rebars, short for reinforcing bars, are long, round bars made from carbon steel that are commonly used in reinforced concrete structures to provide strength and stability. Rebars are typically ribbed to improve their bonding with concrete and are available in various diameters, ranging from 6 millimeters to 50 millimeters or more. They are commonly manufactured through hot rolling processes and are produced to meet specific mechanical properties and standards, such as ASTM A615/A615M or BS 4449. Steel rebars are essential components in construction projects such as buildings, bridges, roads, dams, and foundations, where they are embedded within concrete structures to resist tensile and shear forces and prevent cracking and failure. The placement and spacing of rebars are carefully engineered to ensure the structural integrity and durability of the reinforced concrete elements.

The major global manufacturers of Steel Rebars (Reinforcing Steel Bars) include ArcelorMittal, Hebei Iron and Steel, Baowu Group, Jiangsu Shagang, Sabic Hadeed,
