Research Summary

Steel strip is a flat, thin piece of steel that is typically produced through a process called hot rolling or cold rolling. It is characterized by its narrow width and relatively long length, with thicknesses ranging from a few millimeters to less than a millimeter. Steel strips are versatile materials used in a wide range of applications across various industries. Common uses include automotive components (such as body panels, trim, and brackets), construction materials (such as roofing, siding, and framing), industrial machinery (such as conveyor belts and springs), electrical components (such as electrical enclosures and transformers), and packaging (such as metal strapping and seals). Steel strips are available in different grades and surface finishes to meet specific requirements for strength, corrosion resistance, formability, and appearance. They are often supplied in coils for efficient handling and processing in manufacturing operations.

The major global manufacturers of Steel Strip include Baowu Group, Shagang Group, Ansteel Group, Jianlong Group, Shandong Iron & Steel Group, TISCO, HBIS Group, Fujian Wuhang, Shaanxi Iron & Steel, ET Group, etc. The global players competition landscape in this report is divided into three tiers.
