Research Summary

Steel tubular piling pipe, also known as steel piling tubes or steel tubular piles, is a type of steel pipe specifically designed for use in foundation and piling applications. These pipes are typically made from high-strength carbon steel or alloy steel and are manufactured to withstand heavy loads and provide structural support in various soil and marine environments. Steel tubular piling pipes are commonly used in construction projects such as bridges, buildings, docks, wharves, and offshore structures to create deep foundations, stabilize soil, and prevent erosion. They are installed vertically into the ground or seabed through methods such as driving, drilling, or vibratory piling, and can be filled with concrete or other materials to enhance their load-bearing capacity. Steel tubular piling pipes are available in a range of sizes, wall thicknesses, and lengths to meet the specific requirements of each project, and are often coated or treated to provide corrosion resistance and prolong their service life.

The major global manufacturers of Steel Tubular Piling Pipe include TMK IPSCO, EVRAZ North America, Northwest Pipe Company, US steel, ArcelorMittal, JFE Steel, Zekelman Industries, Nippon Steel, Valiant Steel & Equipment, ESC Group, etc. The
