Research Summary

Sterilization indicator tape, also known as autoclave tape or sterilization tape, is a specialized adhesive tape used to indicate whether an item has been subjected to sterilization processes such as steam sterilization in an autoclave. This tape typically features heat-sensitive ink or chemical indicators that change color or display markings when exposed to specific conditions, such as heat and steam. Sterilization indicator tape is applied to the exterior surface of packages, pouches, or wraps containing items to be sterilized, serving as a visual indicator to healthcare workers or sterilization technicians that the contents have been properly processed. The color change or marking on the tape confirms that the package has been subjected to the appropriate sterilization conditions, providing assurance that the enclosed items are sterile and safe for use. Sterilization indicator tape is an essential tool in maintaining sterility assurance and quality control in healthcare facilities, laboratories, and other settings where sterilization is critical for infection control and patient safety.
