Research Summary

Sterilization trays, also known as instrument trays or sterilization containers, are specialized containers used to hold and sterilize medical instruments, devices, and equipment in healthcare facilities and other sterile environments. These trays are typically made from durable materials such as stainless steel or aluminum and feature a perforated or mesh design to allow sterilizing agents, such as steam or ethylene oxide gas, to penetrate and sterilize the contents effectively. Sterilization trays may include silicone or rubber gaskets to create a tight seal and prevent contamination during sterilization and storage. They come in various sizes and configurations to accommodate different types and sizes of instruments and equipment.
