Research Summary

A stick electrode, also known as a welding rod or welding electrode, is a consumable electrode used in shielded metal arc welding (SMAW) or ?stick welding.? It consists of a metal wire core coated with a flux material. During welding, the electrode is connected to a power source and held in the welding torch or holder. As the electrode is brought into contact with the workpiece, an electric arc is established between the electrode and the metal being welded, generating intense heat. The flux coating on the electrode melts and forms a protective gas shield around the weld pool, preventing atmospheric contamination and allowing for the formation of a strong, durable weld joint. Stick electrodes come in various compositions and sizes, each suitable for specific welding applications and metal types. They are commonly used in construction, fabrication, repair, and maintenance projects across a wide range of industries due to their versatility, simplicity, and effectiveness in welding various materials, including steel, stainless steel, cast iron, and non-ferrous metals.

The major global manufacturers of Stick Electrode include Welding Alloys Ltd, Vorarc

Welding CC., ESAB, Air Liquide S.A., Eureka, Promax Welding Consumables, Miller Electric Mfg.
