Research Summary

Stone baskets, also known as stone retrieval baskets or stone extraction baskets, are medical devices used in urology procedures to remove kidney or ureteral stones from the urinary tract. These baskets typically consist of a flexible or semi-rigid wire basket attached to the end of a long, slender shaft. The basket is designed to open and close, allowing it to capture and securely hold kidney or ureteral stones of various sizes. Stone baskets are inserted into the urinary tract through a cystoscope or ureteroscope, a thin, flexible tube equipped with a camera and light source. Once the stone is located, the basket is maneuvered to surround the stone, and then closed to trap it securely. The stone can then be removed from the urinary tract by retracting the basket. Stone baskets come in different sizes and configurations to accommodate different stone sizes and locations within the urinary tract. They are essential tools in minimally invasive procedures such as ureteroscopy or percutaneous nephrolithotomy, allowing for the safe and effective removal of kidney or ureteral stones without the need for open surgery.

The major global manufacturers of Stone Baskets include Boston Scientific, Cook Medical, Olympus, Coloplast Corp, BARD, Medi-Globe Technologies, Stryker, Cogentix Medical, UROMED, etc. The global players competition landscape in this report is divided into three tiers.
