Research Summary

A Storage Area Network (SAN) is a specialized network architecture that enables multiple servers to access shared storage devices or pools of storage capacity. SANs are typically used in enterprise environments and data centers to provide centralized storage management, scalability, and high availability for mission-critical applications and data. SANs consist of three main components: storage devices such as disk arrays or tape libraries, hosts or servers connected to the SAN, and a network infrastructure that interconnects the storage devices and hosts. SANs use protocols such as Fibre Channel, iSCSI (Internet Small Computer System Interface), or Fibre Channel over Ethernet (FCoE) to facilitate communication between servers and storage devices over high-speed, dedicated networks. SANs offer benefits such as improved performance, flexibility, and data protection through features like data replication, snapshots, and storage virtualization. They are commonly used for applications such as database servers, email servers, virtualization platforms, and file sharing systems, where high-performance storage and reliable access to data are essential.

The major global suppliers of Storage Area Network (SAN) include Dell, HPE, Cisco, IBM, Juniper Networks, Hitachi, NetApp, Marvell, Pure Storage, Broadcom, Extreme Networks, NEC, Fujitsu, Huawei, Infinidat, etc. The global players competition landscape in this report is divided into three tiers.
