### Research Summary

Straight Seam Submerged Arc Welded (SSAW) pipe is a type of steel pipe produced through the submerged arc welding (SAW) process, where a continuous weld seam runs along the length of the pipe. In this method, the steel plate is first rolled into a cylindrical shape, and then the edges are welded together using a submerged arc welding technique. This involves the use of a flux to create a protective layer over the welding area, which prevents contamination and oxidation, resulting in a high-quality, robust weld. SSAW pipes are known for their strong, smooth weld seam and are widely used in industries such as oil and gas, construction, and infrastructure for transporting liquids and gases, as well as for structural applications. The process ensures high efficiency and consistency in the weld quality, making SSAW pipes suitable for high-pressure applications and long-distance pipelines.
