Research Summary

A strainer filter is a type of filtration device used to remove solid particles and debris from liquids or gases flowing through a pipeline or system. It typically consists of a perforated or meshed screen or basket that traps particles larger than the openings in the screen, allowing the filtered fluid to pass through while retaining the contaminants. Strainer filters are commonly installed in piping systems, pumps, valves, and other equipment to protect downstream components from damage or clogging caused by foreign particles. They come in various configurations, including Y-strainers, T-strainers, basket strainers, and duplex strainers, each suited to specific applications and flow rates. Strainer filters are widely used in industries such as water treatment, chemical processing, oil and gas, food and beverage, pharmaceuticals, and HVAC systems, where maintaining clean and efficient operations is essential. Regular cleaning and maintenance of strainer filters are necessary to ensure optimal performance and prevent system downtime.
