### Research Summary

Strapping machines are automated devices used to apply strapping or banding to packages, bundles, or palletized loads for secure and efficient packaging and shipping. These machines streamline the strapping process by automatically tensioning, sealing, and cutting the strapping material, eliminating the need for manual strapping tools and reducing labor costs and packaging time. Strapping machines come in various configurations and styles to accommodate different packaging requirements and production volumes. Common types of strapping machines include semi-automatic machines, which require some manual intervention to feed the strapping material and position the package, and fully automatic machines, which operate without operator assistance and can handle high-speed strapping operations. Strapping machines can use different types of strapping materials such as plastic (polypropylene or polyester) or steel, and they may employ various strapping methods such as friction welding, heat sealing, or ultrasonic welding to secure the strapping. Strapping machines are widely used in industries such as manufacturing, distribution, logistics, and warehousing, where efficient and reliable packaging is essential for product protection and

transportation.

The major global manufacturers of Strapping Machines include Signode, MJ Maillis, Cyklop, Fromm, StraPack, Mosca, Samuel Strapping Systems, Transpak, Polychem, Yongsun, Xutian Packing Machine, etc. The global players competition landscape in this report is divided into three tiers.
