Research Summary

Styrene-maleic anhydride (SMA) copolymer is a synthetic resin produced through the copolymerization of styrene and maleic anhydride monomers. This copolymer exhibits a unique combination of properties, including excellent adhesion, thermal stability, and chemical resistance, making it suitable for a wide range of applications. SMA copolymers are commonly used as additives in various industries, including coatings, adhesives, pharmaceuticals, and personal care products. In coatings and adhesives, SMA copolymers act as adhesion promoters and modifiers, enhancing the bonding strength and durability of the finished products. They are also used as dispersing agents and compatibilizers in polymer blends and composite materials, improving the dispersion of fillers and reinforcing agents and enhancing the mechanical properties of the final products. Additionally, SMA copolymers find applications in pharmaceutical formulations as excipients and drug delivery systems, where they provide controlled release and stability to active ingredients. In the personal care industry, SMA copolymers are used in hair care products, skincare formulations, and oral care

products for their film-forming and conditioning properties. Overall, styrene-maleic anhydride copolymer is a versatile additive that contributes to the performance and functionality of various products across different industries.
