Research Summary

Sucralose is an artificial sweetener that is about 600 times sweeter than sucrose (table sugar), making it one of the most potent sweeteners available. It is derived from sucrose through a process that selectively substitutes three chlorine atoms for three hydroxyl groups on the sugar molecule. Sucralose is used as a sugar substitute in a variety of food and beverage products, including soft drinks, baked goods, dairy products, canned fruits, and chewing gum, among others. Unlike some other artificial sweeteners, such as aspartame and saccharin, sucralose is heat-stable and can be used in cooking and baking without losing its sweetness. It is also non-caloric, meaning it provides sweetness without adding calories or carbohydrates to the diet. Sucralose is widely used as a low-calorie alternative to sugar, particularly in products marketed to individuals seeking to reduce their sugar intake or manage their weight.

The major global manufacturers of Sucralose include Tate & Lyle, JK Sucralose, Niutang, New Trend, Techno Sucralose, Hanbang, Guangdong Food Industry Institute, etc. The global players competition landscape in this report is divided into three tiers.
