Research Summary

Sump pumps are mechanical devices used to remove water that has accumulated in a sump basin or pit. They are typically installed in basements or crawl spaces to prevent flooding and water damage by pumping excess water away from the foundation of a building. Sump pumps are activated by a float switch or sensor that detects rising water levels in the sump pit. When the water reaches a certain level, the pump turns on automatically and begins pumping water out of the pit through a discharge pipe and away from the building, typically to a storm drain, dry well, or other suitable location. Sump pumps are available in various types, including submersible pumps, pedestal pumps, and battery backup pumps, and they come in different sizes and capacities to suit different applications and water removal needs. They are essential components of many residential and commercial buildings, providing an effective solution for managing groundwater and preventing water damage in low-lying areas prone to flooding.

The major global manufacturers of Sump Pumps include Pentair, Zoeller, Franklin Electric, Liberty Pumps, Wayne, Xylem, Grundfos, Sulzer, WILO, Glentronics, RIDGID, Tsurumi Pump, LEO Group, etc. The global players competition landscape in this report
